**Examples of the 'XML2RFC' Version 2 and 3 Vocabularies
draft-hoffman-rfcexamples-04**

Abstract

This document gives examples of use of the "XML2RFC" vocabulary. The examples cover both version 2 and version 3. The purposes of this draft is to give developers of tools that process v2 and/or v3 documents a corpus to test against.

Editorial Note (To be removed by RFC Editor)

Discussion of this draft takes place on the rfc-interest mailing list (rfc-interest@rfc-editor.org), which has its home page at <https://www.rfc-editor.org/mailman/listinfo/rfc-interest>.

Status of This Memo

This Internet-Draft is submitted in full conformance with the provisions of [BCP 78](#) and [BCP 79](#).

Internet-Drafts are working documents of the Internet Engineering Task Force (IETF). Note that other groups may also distribute working documents as Internet-Drafts. The list of current Internet-Drafts is at <http://datatracker.ietf.org/drafts/current/>.

Internet-Drafts are draft documents valid for a maximum of six months and may be updated, replaced, or obsoleted by other documents at any time. It is inappropriate to use Internet-Drafts as reference material or to cite them other than as "work in progress."

This Internet-Draft will expire on May 7, 2016.

[1.](#) Introduction

This document gives examples of use of the "XML2RFC" vocabulary. The examples cover both version 2 [[XML2RFCv2](#)] and version 3 [[XML2RFCv3](#)]. The purpose of this document is to help developers of tools that process v2 and/or v3 documents to see examples of the documents.

Earlier versions of this document said that it was to help people with v2 documents transition to v3. The authors have backed off from that goal. Instead, we point out that the changes from v2 to v3 are listed in detail in Section 1.2 of [[XML2RFCv3](#)]. Also, we expect that there will be additional documents created later describing the v2-to-v3 conversion, as well as tools that will do as much of the conversion as possible.

This is meant to be a short-lived document. It is not expected that this document will be published as an RFC.

[2.](#) Example of a v2 Document

The following is a v2 document that has all the elements that are needed for typical Internet-Drafts.

```
<?xml version="1.0" encoding="US-ASCII"?>

4. Security Considerations

The examples in this document do not introduce any new security considerations.

5. IANA Considerations

There are no IANA considerations for this document.

6. Acknowledgments

The ideas for the examples in this document come from many people over a long period of time. Special thanks go to the Alice Russo and other members of the RFC Design Team for suggestions and debugging help.

7. Normative References
