The OpenLDAP Project is operating an experimental LDAP (Lightweight
Directory Access Protocol) referral service known as the "OpenLDAP
Root Service". The automated system generates referrals based upon
service location information published in DNS SRV RRs (Domain Name
System location of services resource records). This document
describes this service.

This memo defines an Experimental Protocol for the Internet community.
It does not specify an Internet standard of any kind. Discussion and
suggestions for improvement are requested. Distribution of this memo
is unlimited.
